

'Cleanline' Ultrasonic Cleaning Systems

'Cleanline' 4-60 Machine

The Power of Ultrasonics

'Cleanline' multi-stage, ultrasonic cleaning systems offer the ultimate in aqueous, precision cleaning technology. High-frequency sound waves provide a deep-cleaning action, even on complex component geometries, without stress or damage to the component. This makes the ultrasonic cleaning process ideal for those critical cleaning applications requiring consistent, high-quality cleaning performance.

'Cleanline' machines are available in a range of standard sizes with 2, 3, 4 or 5 process stages to incorporate washing, rinsing, passivation and drying as required. Alternatively, if a standard system doesn't quite fit the bill, we can tailor a machine to suit the specific requirements of your application.

'Cleanline' multi-stage machines can be supplied in user-friendly, manual format or upgraded to provide full process automation.

'Cleanline' – the cost-effective answer to your precision cleaning problems.

Cleanline

'Cleanline' Features:

- Stainless Steel Construction.
- Range of Sizes from 60 litres to 240 litres capacity.
- 2, 3, 4 and 5 stage systems available as standard.
- High-efficiency, piezo-electric, ceramic transducers.
- Thermostatic temperature control.
- User-friendly, manual operation.
- Optional automation with multi-basket capability.
- Range of optional features to suit the application.
- 2 Years' Warranty.

'Cleanline' Machine Range:

MODEL:	UNITS	60	80	120	160	240
Compartment Length	mm	550	650	650	900	900
Compartment Width	mm	300	330	500	500	750
Compartment Depth	mm	400	400	400	400	400
Basket Length	mm	450	560	560	800	800
Basket Width	mm	250	280	450	450	680
Basket Depth	mm	350	350	350	350	350
Ultrasonic Power	W	750	1000	1250	1500	2000
Liquid Capacity (each stage)	litres	60	80	120	160	240

The above data is approximate for illustration purposes only.
