

'Cleanzone' TS Hot Water Spray Wash Systems

Automatic Parts Washing

'Cleanzone' TS machines are sturdy, top-loading, single-stage, automatic parts washing machines. Using only water and biodegradable detergents, they provide safe, environmentally-responsible component cleaning at a budget price.

The high-pressure spray system operates in conjunction with a rotating basket to provide thorough cleaning of a wide range of components and contaminants. The temperature of the wash solution can be adjusted to suit the specific application by means of thermostatically-controlled, electric immersion heaters.

Unlike many machines on the market, 'Cleanzone' TS units are manufactured entirely of stainless steel and have motorised component baskets to ensure consistent performance, load after load. They are available in a range of standard sizes and, with an extensive list of optional features, can be tailored to suit any application and budget.

'Cleanzone' TS – The cost effective parts washer.

'Cleanzone' Features:

- Stainless Steel Construction.
- Range of Standard Sizes.
- Motorised Component Basket.
- Thermostatic Temperature Control.
- Process Timer.
- Low Water-Level Protection.
